AI Readiness Without Theater

A practical guide for high-impact AI adoption

Outcome

Pick AI use cases that actually improve how your team works.

Diagnose

See where work is getting stuck.

Decide

Choose one next move.

Execute

Move with a practical plan.

Best for Product and Leadership | Topic: AI

amalgam-inc.com/playbooks

One-page summary

Pick AI use cases that actually improve how your team works. This guide gives you a practical path from uncertainty to action.

- Best for: Product and Leadership
- Topic: AI
- Read this first, then jump to the section that matches your pressure.
- Use one page at a time during real team decisions.

When to use

Use this playbook when these conditions start showing up in your team.

- AI pilots are happening, but outcomes are still unclear.
- Pressure to move fast is higher than clarity on value.
- Use cases feel scattered across teams.
- You need impact on delivery, not just demos.

Symptoms checklist

Check everything that feels true right now.

- [ ] Many experiments, few production workflows.
- [ ] No shared criteria for what counts as AI value.
- [ ] Teams optimize for novelty over measurable outcomes.
- [ ] Governance starts late and slows momentum.
- [ ] Leaders cannot compare use cases with one lens.

Decision framework

Use these four lenses together. If one lens is weak, the decision usually gets risky fast.

Value

Does this use case improve speed, quality, or cost?

Feasibility

Do we have data, workflow fit, and readiness now?

Risk

What trust, compliance, or operational risks need guardrails?

Scale path

Can this move from pilot to routine team behavior?

Step-by-step approach (part 1)

Use these steps in order. Keep each step simple and observable.

- List current AI efforts and tie each to one business outcome.
- Prioritize use cases with clear workflow fit and measurable upside.
- Define baseline metrics before running pilots.

Step-by-step approach (part 2)

Finish the sequence and confirm what changed before adding more scope.

- Set guardrails for security, privacy, and quality before scale.
- Pilot quickly with one owner and one team workflow.
- Scale only what improves real delivery outcomes.

Examples

Use examples to pressure-test your assumptions before committing.

- A support team used AI triage to cut response prep time.
- A product team automated release notes and saved weekly ops effort.
- An engineering team used AI test drafting with strict review guardrails.

Templates

These templates are designed for working sessions, not slides.

- AI use-case prioritization matrix
- Pilot scorecard template
- Guardrail checklist template
- Scale decision memo template

30-day plan

Use this as a practical first month plan.

- Week 1: Inventory use cases and define value criteria.
- Week 2: Select one high-value pilot and baseline metrics.
- Week 3: Run pilot with guardrails and weekly review.
- Week 4: Decide scale, revise, or stop based on evidence.

Example walkthrough: support operations

The team used AI to assist triage and response drafting.

- Baseline established before pilot launch.
- Guardrails defined for escalation and review.
- Scaled only after measurable quality gains.

Template workbook: pilot brief

Keep pilots small, measurable, and easy to evaluate.

- Use case statement
- Primary metric
- Owner and timeline
- Go or no-go criteria

Risk and guardrail prompts

Use these prompts before moving beyond pilot mode.

- Where could quality fail silently?
- What compliance checks are required?
- Who approves model behavior updates?
- What rollback path exists if outcomes degrade?

Weekly adoption scorecard

Track these signals each week to avoid pilot drift.

- [ ] Usage frequency in real workflows
- [ ] Quality trend against baseline
- [ ] Time saved per workflow
- [ ] Operational incidents and lessons

Example walkthrough: release operations

A delivery team reduced release documentation overhead.

- Focused on one recurring workflow first.
- Kept human approval for production output.
- Scaled after repeatable quality and time gains.

Final next step

- Pick one workflow where time or quality can clearly improve.
- If you need support, we can help shape a focused pilot plan with your team.
- The goal is practical adoption that changes real work, not AI theater.

How Amalgam can help

Founder Review

Get a clear read on what is stuck and what to do next.

Expert Guidance

Unblock one critical path and get delivery moving again.

Outcome Partnership

Stay supported while work ships and priorities keep changing.
